JAPANESE TRUCK BALL JOINT REMOVER (39mm) **PAT. M 362085**

- On car maintenance
- The best tool for removing truck ball joint which is in tie rod end, drag link and relay rod...etc.
- No damage to ball joint and related parts.
- Application: Over 4 tons Japanese trucks and most heavy duty trucks.

※ **Note:**

- Make sure the dimension or specification of ball joint is a match before installing.
- Please lubricate the central bolt before using.
- The central bolt is consumable. Please replace it when losing the thread.
- The power is very strong when ball joint departs from related parts. To prevent the parts from falling down suddenly, please loosen lock nut till its surface equal to the parts instead of to take it off.
- Please wear goggles while using this tool.
