

ET3569
Brake Disc Measuring Tool
200 - 400 mm

Brake Disc Measuring Tool

Fig. 1 Product Diagram

ET3569 Vernier Caliper For Brake Discs

Universally applicable

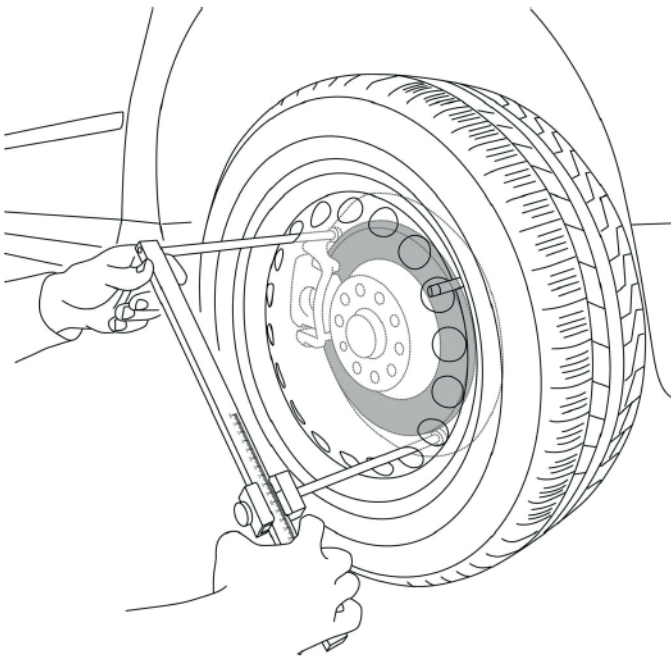

Field of Application

Designed to measure the diameter of brake discs with the wheels still in situ on the vehicle

Technical Data

Span (measuring range)..... 200 - 400 mm

Fig. 2 Application

How To Use

Insert vernier caliper into suitable rim holes and carry out the measurement of the brake discs (Fig. 2)

Note 1:

If the measuring tips are in contact with the rim before touching the brake disc at the outer diameter, use the slides to compensate for the missing difference in height if conditions allow. To do this, push the slides up to the measuring tips

Note 2:

If you need to use the slides to measure the diameter, remember to deduct 10mm* from the measured brake disc diameter value

* difference resulting from the slides
